PROFESSIONAL SUMMARY

Software Developer with 1.5 years of professional experience building and deploying production services for the aviation industry, combining backend depth with forward deployed, client facing delivery. Work directly with operations stakeholders to turn real business workflows into reliable software, then own it through deployment and support. Rebuilt an operations critical application that replaced a legacy Qlik dashboard, cutting load time from 2-3 minutes to 2-3 seconds. Delivered 5+ production services using Node.js, TypeScript, Express and PostgreSQL on GCP with Docker and CI/CD, and work across the full stack with React, MongoDB and AI assisted workflows.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
Backend:	Node.js, Express.js, REST API Design, TypeORM, JWT Authentication, Socket.io, Microservices, Cron Services
Frontend:	React.js, Next.js, Tailwind CSS, Responsive Web Design
Databases:	PostgreSQL, MySQL, MongoDB, Redis, Apache Parquet, Database Design, Query Optimization
Cloud and DevOps:	GCP, AWS (EC2, S3), Docker, CI/CD, Linux, Vercel, Railway, Production Deployment and Support
Forward Deployed:	Stakeholder Requirement Gathering, Workflow and Data Flow Mapping, Client Facing Delivery, Technical Documentation
AI and Automation:	AI assisted development workflows, Prompt Engineering, Workflow Automation, OpenAI API, GitHub API
Testing and Tools:	Unit Testing, Git, GitHub, Postman, Jira, Eraser.io, LucidChart, Agile Methodologies

PROFESSIONAL EXPERIENCE

Software Developer, Full-time **Dec 2025 to Present**

DnT Infotech LLP, Ahmedabad, India

- Rebuilt an operations critical aviation application (frontend and backend) that replaced a legacy Qlik dashboard and its WizLib writeback connector, querying Parquet data sources directly instead of going through the BI layer and cutting load time from 2-3 minutes to 2-3 seconds, with a best recorded response under 100ms.
- Worked as a forward deployed engineer with aviation operations teams, translating workflows around AMOS/MM data, aircraft ground events and MEL processes into production services, and iterating directly on their feedback after release.
- Delivered 5+ production services across the aviation domain, designing REST APIs with Node.js, Express and TypeORM, including JWT based authentication and authorization, and maintaining unit tests alongside every change.
- Owned performance optimization end to end, profiling and restructuring complex analytical queries over Parquet datasets holding millions of aviation operational records.
- Implemented security fixes and Node.js version upgrades across 50+ repositories with zero breaking changes, and shipped every one of them to production.
- Migrated 10+ legacy scheduled jobs to Node.js cron services for reliable data synchronisation, improving failure recovery and visibility.
- Deployed containerised services to GCP using Docker and CI/CD pipelines, owning projects from requirements through production release and post release support.
- Built an AI assisted development workflow (Jira ticket to branch to implementation to PR to QA) using rules, reusable skills and agent definitions, increasing ticket throughput and producing more consistent, reviewable changes.

Associate Software Developer, Internship **Jun 2025 to Nov 2025**

DnT Infotech LLP, Ahmedabad, India

- Partnered with a senior engineer (6+ years) and business stakeholders to document end to end aviation operations, producing 300+ technical and data flow diagrams in 3 months, including a master diagram mapping the complete operational and data flow, still used for onboarding and system design.
- Designed reusable AI prompt templates in Eraser to standardise diagram output across all 300+ deliverables; these practices were adopted as a company standard for subsequent client facing projects.
- Took full ownership of a backend project from requirements through to delivery using Node.js, TypeScript, Express and PostgreSQL.

PROJECTS

CampusConnect *React.js, Node.js, Express, MongoDB, Socket.io, JWT*

- Full stack mentorship platform connecting alumni with first year students: real time chat on Socket.io, JWT authenticated REST APIs, and MongoDB backed profiles with role based access control. React and Tailwind frontend on Vercel, backend on Railway.

ThinkTank, AI Portfolio Generator *Next.js, TypeScript, Node.js, MongoDB, GitHub API, OpenAI API*

- AI powered portfolio generator that ingests GitHub and LinkedIn profile data through an ETL pipeline and produces a publish ready portfolio via the OpenAI API. TypeScript and Node.js backend with MongoDB, deployed on AWS EC2 and S3.

EDUCATION

Bachelor of Engineering, Computer Engineering **2022 to 2026**

Shree Swaminarayan Institute of Technology, Ahmedabad, India

Higher Secondary Certificate, Science Stream **2021 to 2022**

Ananya Vidyalaya, New Zundal, India
